Art Unit: 1751

### **DETAILED ACTION**

### Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - Claims 1, 3-4, drawn to a composition, classified in class 252, subclass
     73.
- II. Claims 5-6, drawn to a device, classified in class 30, subclass 306.

  The inventions are distinct, each from the other because of the following reasons:
- 2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are related to a coolant compositions and a machining device.
- 3. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 4. During a telephone conversation with Kenneth Salen on February 2, 2006 a provisional election was made without traverse to prosecute the invention of Group I, claims 1 and 3-4. Affirmation of this election must be made by applicant in replying to this Office action. Claims 5-6 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.
- 5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Art Unit: 1751

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

### Continued Examination Under 37 CFR 1.114

6. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12-2-05 has been entered.

# Claim Rejections - 35 USC § 112

- 7. The following is a quotation of the first paragraph of 35 U.S.C. 112:
  - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 8. Claim 1 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The aforementioned claim describes the compound organic amanoide, however, the examiner cannot reasonably determine from the specification or prior art what this component encompasses. Applicant is advised to correct and/or clarify the description

Art Unit: 1751

of this component wherein one of ordinary skill would be able to determine the metes or bounds of the invention.

- 9. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.
- 10. Claims 1 and 3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 states the word "type" after the compounds amanoide, triasol and xylenol. The addition of the word "type" to an otherwise definite expression extends the scope of the expression so as to render it indefinite. Ex parte Copenhaver, 109 USPQ 118 (Bd. App. 1955). Ex parte Attig, 7 USPQ2d 1092 (Bd. Pat. App. & Inter. 1986).

## Claim Objections

- 11. Claim 1 and 3 are objected to because of the following informalities: For clarity it is suggested applicant use proper Markush language in describing the water-soluble substance in claim 1, line 2, and claim 3, line 3, where applicant states "including amine and inorganic salt" should read, in accordance with Markush language, "....a water-soluble substance selected from the group consisting of an amine and an inorganic salt". Appropriate correction is required.
- 12. Claim 1 is objected to because of the following informalities: Applicant states the phrase "a surface active agent comprising" in claim 1, however, it appears that the surface active agent is a part of the water-soluble substance Markush recited in the

Art Unit: 1751

previous sentence and therefore it should not have the transitional phrase "comprising" recited thereafter. Appropriate correction is required.

### Claim Rejections - 35 USC § 103

- 13. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 14. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
  - 1. Determining the scope and contents of the prior art.
  - 2. Ascertaining the differences between the prior art and the claims at issue.
  - 3. Resolving the level of ordinary skill in the pertinent art.
  - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 15. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 1751

16. Claims 3-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maes et al (6,398,984).

Maes et al disclose a corrosion inhibitor for the protection of metals in heat transfer fluids and engine coolants. Maes et al disclose an antifreeze or coolant concentrate comprising 0.01-5% by weight of an aliphatic carboxylic acid (col. 4, lines 1-20); 0.0005-1% by weight of a fluoro carboxylic acid or ammonium or amine salt thereof (col. 4, lines 50-55); and 0.01 to 5.0% by weight of additional corrosion inhibitor such as alkali metal nitrites, borates, nitrates may be employed (col. 5, lines 25-26). Maes et al further teach concentrate in example 5 was immersed in ASTM 1384 corrosive water containing sodium chloride and sodium bicarbonate (col. 8, lines 65-col. 9, line 5).

Maes et al do not teach with sufficient specificity the claimed proportions and preferred embodiments. However, it would have been obvious to the skilled artisan to comprise coolant formulations with sodium chloride, sodium bicarbonate, nitrite corrosion inhibitors and/or amine salts of fluorine component and aliphatic carboxylic acid surface active agents in their requisite proportions because Maes et al teach each of the components for the purpose of a coolant formulation and absent a showing to the contrary the skilled artisan with reasonable expectation of success would have been motivated to combine the components to specifically teach the claimed invention.

During patent examination, the pending claims must be "given \*>their< broadest reasonable interpretation consistent with the specification." > In re Hyatt, 211 F.3d 1367, 1372, 54 USPQ2d 1664, 1667 (Fed. Cir. 2000).< Applicant always has the opportunity to amend the claims during prosecution, and broad interpretation by the

Art Unit: 1751

examiner reduces the possibility that the claim, once issued, will be interpreted more broadly than is justified. In re Prater, 415 F.2d 1393, 1404-05, 162 USPQ 541, 550-51 (CCPA 1969)

A reference may be relied upon for all that it would have reasonably suggested to one having ordinary skill the art, including nonpreferred embodiments. Merck & Co. v. Biocraft Laboratories, 874 F.2d 804, 10 USPQ2d 1843 (Fed. Cir.), cert. denied, 493 U.S. 975 (1989). See also Celeritas Technologies Ltd. v. Rockwell International Corp., 150 F.3d 1354, 1361, 47 USPQ2d 1516, 1522-23 (Fed. Cir 1998)

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Necholus Ogden whose telephone number is 571-272-1322. The examiner can normally be reached on M-Th.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yogendra N. Gupta can be reached on 571-272-1316. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
